Patent Number: US7953416B2

Claim Number: (1)

52. A process for dynamic routing of customer contacts to service providers via a telephone, comprising the steps of: establishing accounts for a plurality of service providers that provide non-telephonic -based services; permitting the plurality of service providers to bid against one another for a live telephone call based on a customer per-contact charge; creating a contact list comprised of the service providers ranked from the highest bidder service provider to the lowest bidder service provider; receiving a live telephone contact from a customer; routing the live telephone contact from the customer for a live conversation with the highest ranked bidder service provider on the contact list; and charging the service provider account receiving the live telephone contact the customer per-contact amount bid by the service provider.

Element 1:

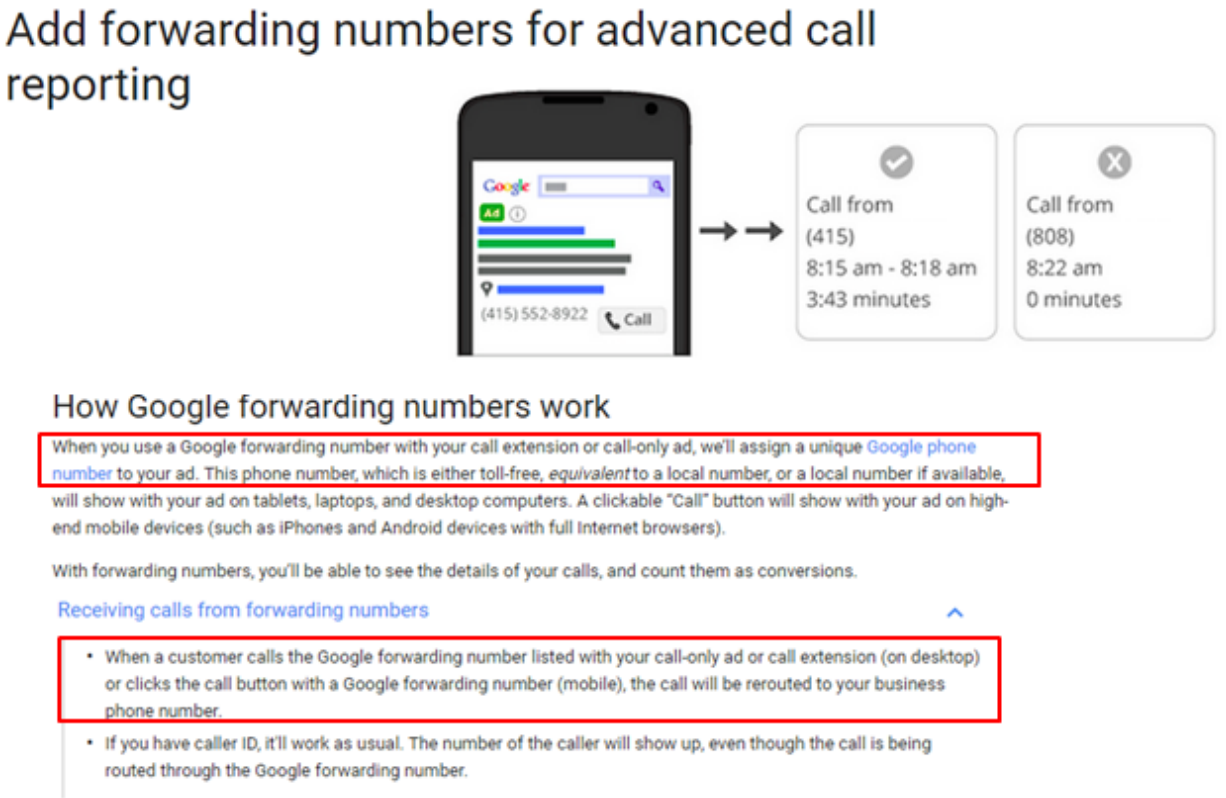

52. A process for dynamic routing of customer contacts to service providers via a telephone, comprising the steps of:

Google introduced a new feature of "call only" ads on adwords. This feature lets customers call a advertiser directly from Google, without having to visit their website or dial their phone number manually. Google provides a feature of adding a Google forwarding number, that gets displayed on the ad. When a customer call at the google forwarding number (mobile), the call will be rerouted to the advertiser's business number.

Please note that customers contact is routed dynamically using dynamic ad placement strategies, but a customer's call is not routed dynamically. Hence, we have considered, a customer's information/service requirement as a customer contact, and not the call made by a customer.

Supporting Evidence:

Element 2:

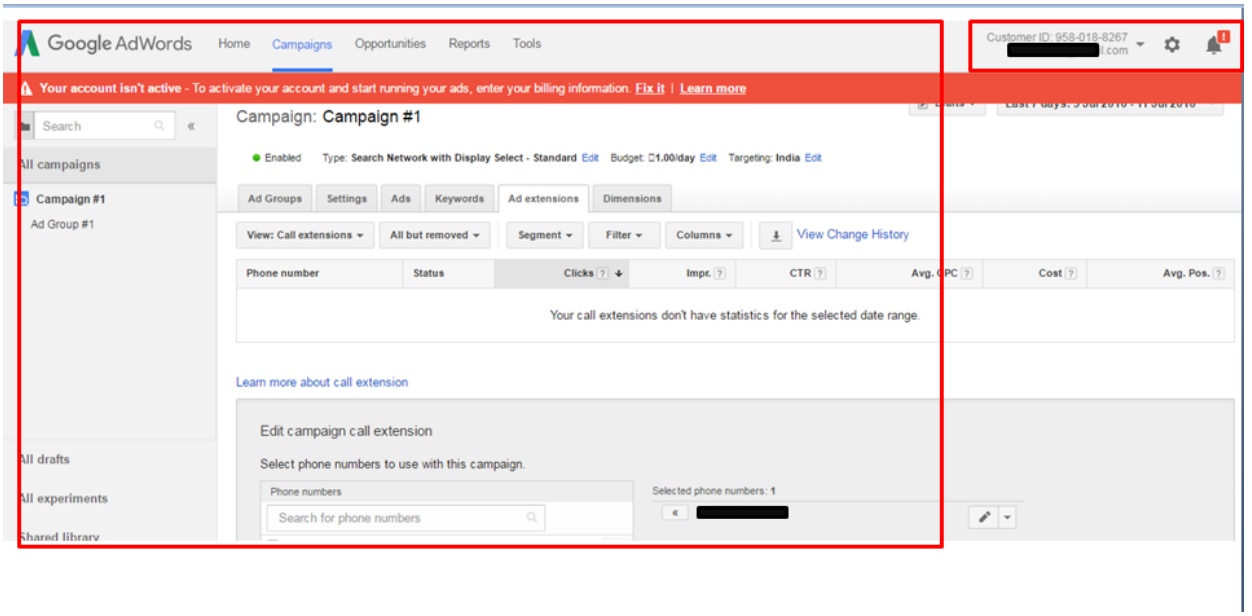

establishing accounts for a plurality of service providers that provide non-telephonic -based services;

Google adwords allows multiple business to create their adwords profile and submit their "Call only" ads. To create a call only ad, a person have to create a google adword account and the service provided by them are generally non-telephonic like pizza delivery, travel agent etc. Using their google adword accounts, a advertiser can bid, control and manage their "call only" ads.

Ref 2: https://support.google.com/adwords/answer/2453991#upgrade

Supporting Evidence:

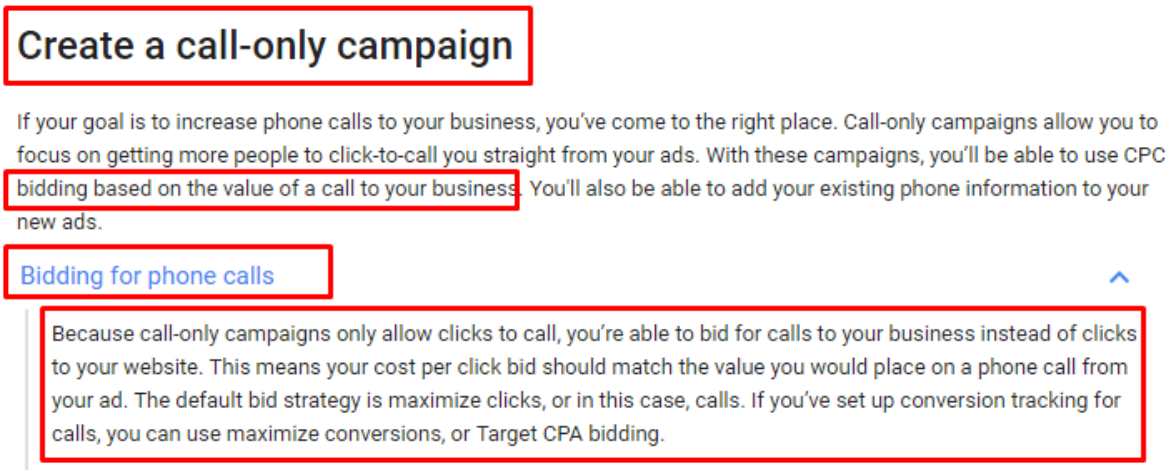

Element 3:

permitting the plurality of service providers to bid against one another for a live telephone call based on a customer per-contact charge;

Google allows advertisers to bid for a spot of their "call only" ad in a Google search page. Call-only campaigns allow advertisers to focus on getting more people to click-to-call you straight from your ads. With these campaigns, advertisers are be able to use CPC bidding based on the value of a call to your business. These bids are pitted against each other for delivering ads to a search page on mobile.

Ref 1: https://support.google.com/adwords/answer/2453991#callonly

Supporting Evidence:

Element 4:

creating a contact list comprised of the service providers ranked from the highest bidder service provider to the lowest bidder service provider;

Google Adwords receive a list of advertisers contact/profiles alongside their bid. As per Google's references, the Cost per Call bidding process is similar to Google's cost per click model. Hence, Google creates a list of ads which contains their bid values. Also, Google uses a Quality Score of ads, in addition to bid value, to fix a position of ads for particular search query. In a scenario, where quality score of three ads are same, the ad with highest bid value will be

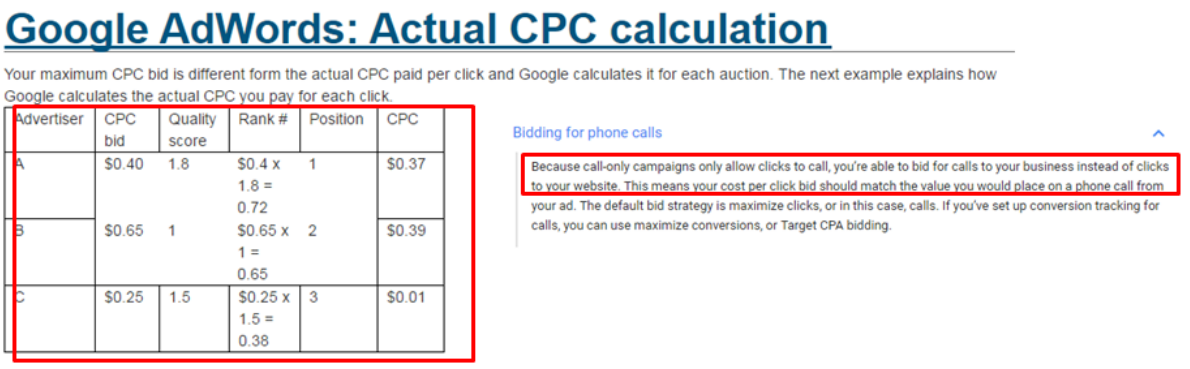

displayed first in the Google search results page. The rest of the results are displayed as per serial order of their bid value.

Ref 2: https://support.google.com/adwords/answer/2453991#callonly

Ref 3: http://www.chipkin.com/google-adwords-actual-cpc-calculation/

Supporting Evidence:

Google AdWords: Actual CPC calculation

Your maximum CPC bid is different form the actual CPC paid per click and Google calculates it for each auction. The next example explains how Google calculates the actual CPC you pay for each click.

Advertiser	CPC bid	Quality score	Rank #	Position	CPC
A	$0.40	1.8	$0.4 x 1.8 = 0.72	1	$0.37
B	$0.65	1	$0.65 x 1 = 0.65	2	$0.39
C	$0.25	1.5	$0.25 x 1.5 = 0.38	3	$0.01

Bidding for phone calls

Because call-only campaigns only allow clicks to call, you're able to bid for calls to your business instead of clicks to your website. This means your cost per click bid should match the value you would place on a phone call from your ad. The default bid strategy is maximize clicks, or in this case, calls. If you've set up conversion tracking for calls, you can use maximize conversions, or Target CPA bidding.

Element 5:

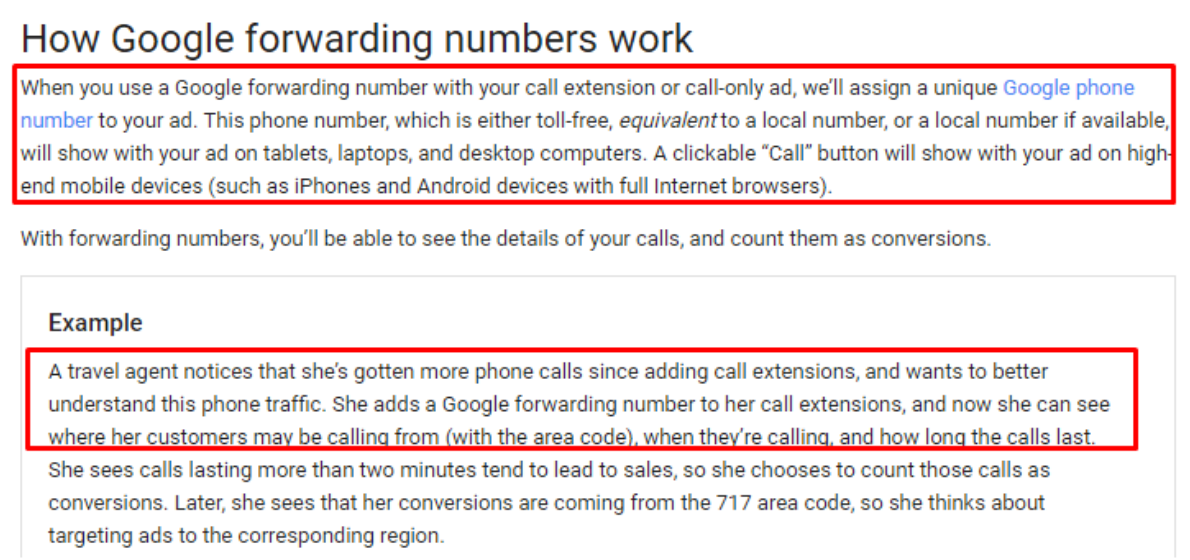

receiving a live telephone contact from a customer;

When an advertiser uses a Google forwarding number with a call-only ad, Google assigns a unique Google phone number to the ad. This phone number, which is either toll-free, equivalent to a local number, or a local number if available, will show with your ad on tablets, laptops, and desktop computers. A clickable "Call" button will show with the ad on high-end mobile devices, to which a customer can call.

Ref 1: https://support.google.com/adwords/answer/2454052

Ref 2: https://support.google.com/adwords/answer/2382961

Supporting Evidence:

How Google forwarding numbers work

When you use a Google forwarding number with your call extension or call-only ad, we'll assign a unique Google phone number to your ad. This phone number, which is either toll-free, *equivalent* to a local number, or a local number if available, will show with your ad on tablets, laptops, and desktop computers. A clickable "Call" button will show with your ad on high-end mobile devices (such as iPhones and Android devices with full Internet browsers).

With forwarding numbers, you'll be able to see the details of your calls, and count them as conversions.

Example

A travel agent notices that she's gotten more phone calls since adding call extensions, and wants to better understand this phone traffic. She adds a Google forwarding number to her call extensions, and now she can see where her customers may be calling from (with the area code), when they're calling, and how long the calls last. She sees calls lasting more than two minutes tend to lead to sales, so she chooses to count those calls as conversions. Later, she sees that her conversions are coming from the 717 area code, so she thinks about targeting ads to the corresponding region.

Element 6:

routing the live telephone contact from the customer for a live conversation with the highest ranked bidder service provider on the contact list; and

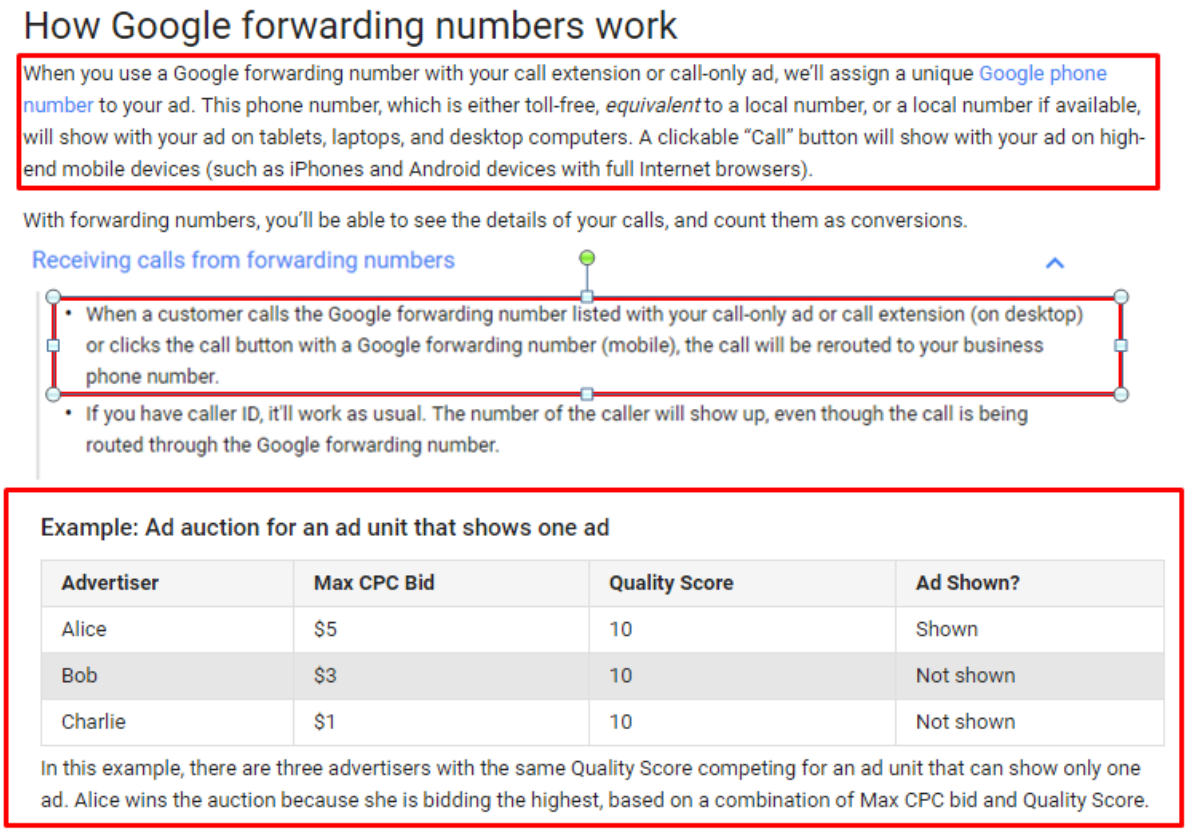

When a consumer calls on a Google phone number assigned to the "Call only" ad, which is positioned in the first in the search page, Google reroutes the live call to the advertiser whose ad has been chosen for that position based on the highest bidding value as well as the quality score of the ad.

In case where the search page is an ad unit that shows one ad, and quality score of all the ads bidding for that ad slot, the ad that will be displayed will be one with the highest bid. This is shown in reference 2.

Ref 1: https://support.google.com/adwords/answer/2454052

Ref 2: https://support.google.com/adwords/answer/2996564

Supporting Evidence:

How Google forwarding numbers work

When you use a Google forwarding number with your call extension or call-only ad, we'll assign a unique Google phone number to your ad. This phone number, which is either toll-free, *equivalent* to a local number, or a local number if available, will show with your ad on tablets, laptops, and desktop computers. A clickable "Call" button will show with your ad on high-end mobile devices (such as iPhones and Android devices with full Internet browsers).

With forwarding numbers, you'll be able to see the details of your calls, and count them as conversions.

Receiving calls from forwarding numbers

- When a customer calls the Google forwarding number listed with your call-only ad or call extension (on desktop) or clicks the call button with a Google forwarding number (mobile), the call will be rerouted to your business phone number.
- If you have caller ID, it'll work as usual. The number of the caller will show up, even though the call is being routed through the Google forwarding number.

Example: Ad auction for an ad unit that shows one ad

Advertiser	Max CPC Bid	Quality Score	Ad Shown?
Alice	$5	10	Shown
Bob	$3	10	Not shown
Charlie	$1	10	Not shown

In this example, there are three advertisers with the same Quality Score competing for an ad unit that can show only one ad. Alice wins the auction because she is bidding the highest, based on a combination of Max CPC bid and Quality Score.

Element 7:

charging the service provider account receiving the live telephone contact the customer per-contact amount bid by the service provider.

The maximum amount an advertiser will have to pay to Google for receiving the live call from the customer will be the maximum CPC bid that the advertiser has placed. However, Google do not always charge the amount the advertisers bid. Google uses a maximum bid rule and then calculates the minimum amount of bid that can make the advertisers's ad position higher than the next competitor's ad. Thus, if the maximum bid of A is 40 and B is 35, and if both the ads have a same quality score than the amount charge from A will be 35.1. However, in case of a situation where B bids for 39.9, then A will be charged the exact amount that he has bid for placing the "call only" ad in that position.

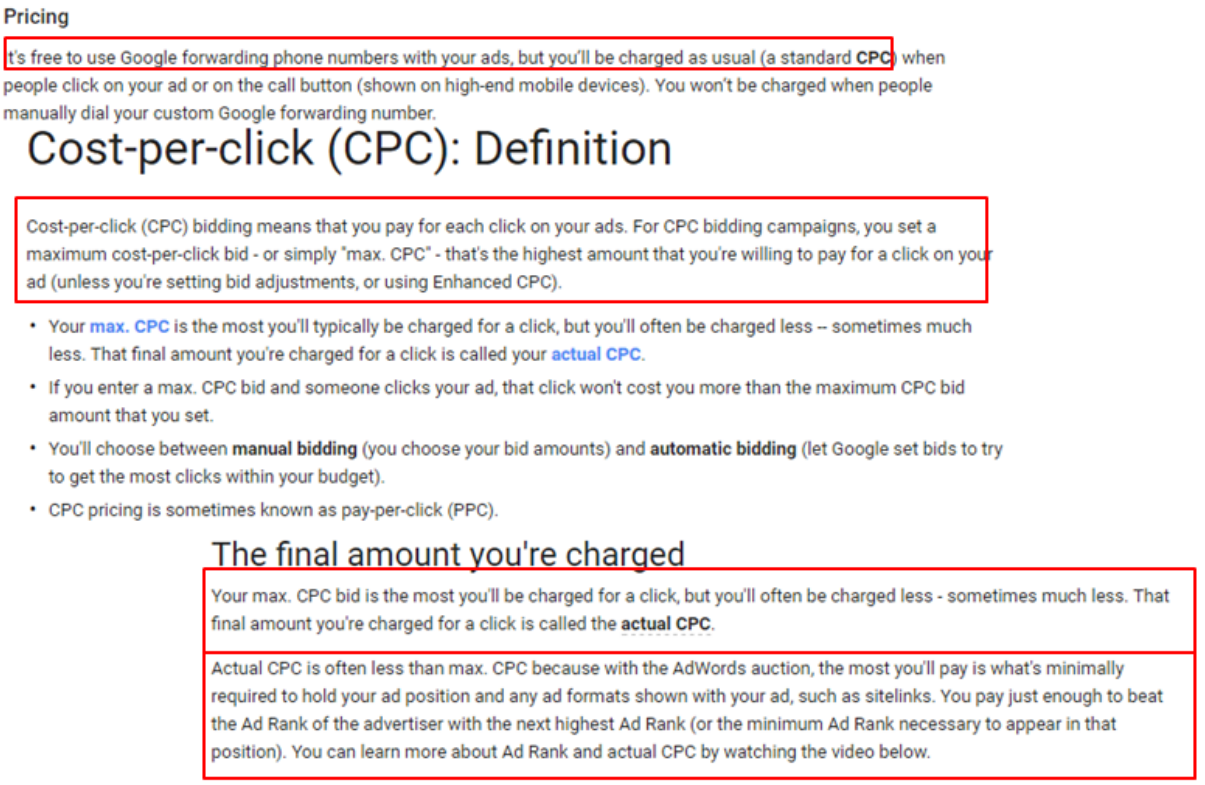

Further, advertiser's can opt for a dynamic bidding using "bid adjustment" which helps the advertiser to bid the exact bid dynamically which can make the advertiser's ad in top position with respect to a competitor's bid. In that situation also, Google will be charging the advertiser

of the service provider the exact amount of the bid for the "call only" ad conversion or rerouting the live call from the customer.

Supporting Evidence:

Pricing

It's free to use Google forwarding phone numbers with your ads, but you'll be charged as usual (a standard **CPC**) when people click on your ad or on the call button (shown on high-end mobile devices). You won't be charged when people manually dial your custom Google forwarding number.

Cost-per-click (CPC): Definition

Cost-per-click (CPC) bidding means that you pay for each click on your ads. For CPC bidding campaigns, you set a maximum cost-per-click bid - or simply "max. CPC" - that's the highest amount that you're willing to pay for a click on your ad (unless you're setting bid adjustments, or using Enhanced CPC).

- Your **max. CPC** is the most you'll typically be charged for a click, but you'll often be charged less -- sometimes much less. That final amount you're charged for a click is called your **actual CPC**.
- If you enter a max. CPC bid and someone clicks your ad, that click won't cost you more than the maximum CPC bid amount that you set.
- You'll choose between **manual bidding** (you choose your bid amounts) and **automatic bidding** (let Google set bids to try to get the most clicks within your budget).
- CPC pricing is sometimes known as pay-per-click (PPC).

The final amount you're charged

Your max. CPC bid is the most you'll be charged for a click, but you'll often be charged less - sometimes much less. That final amount you're charged for a click is called the **actual CPC**.

Actual CPC is often less than max. CPC because with the AdWords auction, the most you'll pay is what's minimally required to hold your ad position and any ad formats shown with your ad, such as sitelinks. You pay just enough to beat the Ad Rank of the advertiser with the next highest Ad Rank (or the minimum Ad Rank necessary to appear in that position). You can learn more about Ad Rank and actual CPC by watching the video below.
