Report of Evidence of Use

The views presented here are of the author only and do not necessarily reflect the views of others. The author is an independent contractor that acts on behalf of neither the patent owner nor any other third party, including SynPat.com/experts. We would like to thank SynPat.com/experts for introducing to us the opportunity to prepare this report. For comments and questions, please feel free to contact us directly, or via my profile at SynPat.com/experts.

Patent Number: US8964588B2

1. A method of performing Quality of Service (QoS) measurement in a universal mobile telecommunications system (UMTS), comprising: a user equipment providing a plurality of data links and setting a plurality of measurement targets among the plurality of data links; the user equipment selecting a specific period; the user equipment determining a first transmission parameter according to a QoS information element or a radio priority information element defined in a 3rd Generation Partnership Project (3GPP) specification; the user equipment acquiring a first value associated with the first transmission parameter of a first data link among the plurality of data links; the user equipment acquiring a second value associated with the first transmission parameter of a second data link among the plurality of data links; the user equipment including the first data link in a first measurement target among the plurality of measurement targets and including the second data link in a second measurement target among the plurality of measurement targets when a difference between the first value and the second value is larger than a predetermined value or including both the first data link and the second data link in the first measurement target when the difference between the first value and the second value is not larger than the predetermined value; and the user equipment acquiring an uplink scheduled Internet Protocol (IP) throughput and a downlink scheduled IP throughput of each measurement target by summing up data throughput of each measurement target during the specific period.

Element 1:

1. A method of performing Quality of Service (QoS) measurement in a universal mobile telecommunications system (UMTS), comprising:

Element 2:

a user equipment providing a plurality of data links

Element 3:

and setting a plurality of measurement targets among the plurality of data links;

Element 4:

the user equipment selecting a specific period;

Element 5:

the user equipment determining a first transmission parameter according to a QoS information element

Element 6:

or a radio priority information element defined in a 3rd Generation Partnership Project (3GPP) specification;

Element 7:

the user equipment acquiring a first value associated with the first transmission parameter of a first data link among the plurality of data links;

Element 8:

the user equipment acquiring a second value associated with the first transmission parameter of a second data link among the plurality of data links;

Element 9:

the user equipment including the first data link in a first measurement target among the plurality of measurement targets

Element 10:

and including the second data link in a second measurement target among the plurality of measurement targets when a difference between

the first value and the second value is larger than a predetermined value

Element 11:

or including both the first data link and the second data link in the first measurement target when the difference between the first value and the second value is not larger than the predetermined value;

Element 12:

and the user equipment acquiring an uplink scheduled Internet Protocol (IP) throughput

Element 13:

and a downlink scheduled IP throughput

Element 14:

of each measurement target

Element 15:

by summing up data throughput of each measurement target during the specific period.

Non-Disclosure Agreement:

We understand that for the purpose of assisting you in collecting data, you may disclose to us certain confidential information that you want to keep confidential; therefore, for good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, we agree as follows:

1. For a period of twelve (36) months from the date we receive your confidential information ("Effective Date"), we will not use or disclose the information, except: (a) in the event that such information (i) comes into the public domain not through us; (ii) is already known to us at the time of disclosure; (iii) is lawfully otherwise learnt or independently developed by us; or (iv) is required to be disclosed by law.

2. Since a breach of our obligations hereunder may result in irreparable harm to you, we agree that upon such breach or threat thereof, you shall be entitled to specific performance and other injunctive relief without posting a bond, and in the event of disclosures required by court order, we shall promptly notify you of the proceeding.

3. This agreement supersedes all prior discussions and writings and constitutes the entire agreement between you and us with respect to the subject matter hereof. This Agreement shall be binding upon the successors and assigns of the respective parties, and may not be modified except by an instrument executed by both parties.
