Patent Number: US8830978B2

1. A data communication method for a wireless communication system, wherein the wireless communication system comprises a base station and user equipment, the base station transmits data to the user equipment via a plurality of the component carriers comprising a series of data transmission cycles, and the method comprises: interleaving starting times of a plurality of active periods of the component carriers in each data transmission cycle, wherein the component carriers with the interleaved starting times of the plurality of active periods are transmitted from the base station to the same one user equipment, wherein the interleaved starting times are non-overlapping through an offset period; sending control data from the base station to the user equipment via the component carriers during the active periods of the component carriers; and sending an activation signal from the base station to the user equipment via an active period of an early activated component carrier to adjust the starting time and the duration of each of the active periods of at least one later-activated component carrier in some of the data transmission cycles, wherein the starting time of the active period of the early activated component carrier is earlier than that of the later-activated component carrier, wherein only one active period is present within each data transmission cycle of the early activated component carrier and within each data transmission cycle of the at least one later-activated component carrier, wherein the early activated component carrier and the at least one later-activated component carrier all have different carrier frequencies.

Element 1:

1. A data communication method for a wireless communication system, wherein the wireless communication system comprises a base station and user equipment,

Element 2:

the base station transmits data to the user equipment via a plurality of the component carriers comprising a series of data transmission cycles,

Element 3:

and the method comprises: interleaving starting times of a plurality of active periods of the component carriers in each data transmission cycle,

Element 4:

wherein the component carriers with the interleaved starting times of the plurality of active periods are transmitted from the base station to the same one user equipment,

Element 5:

wherein the interleaved starting times are non-overlapping through an offset period;

Element 6:

sending control data from the base station to the user equipment via the component carriers during the active periods of the component carriers;

Element 7:

and sending an activation signal from the base station to the user equipment via an active period of an early activated component carrier

Element 8:

to adjust the starting time

Element 9:

and the duration of each of the active periods

Element 10:

of at least one later-activated component carrier in some of the data transmission cycles,

Element 11:

wherein the starting time of the active period of the early activated component carrier is earlier than that of the later-activated component carrier,

Element 12:

wherein only one active period is present within each data transmission cycle of the early activated component carrier

Element 13:

and within each data transmission cycle of the at least one later-activated component carrier,

Element 14:

wherein the early activated component carrier and the at least one later-activated component carrier all have different carrier frequencies.

Non-Disclosure Agreement:

We understand that for the purpose of assisting you in collecting data, you may disclose to us certain confidential information that you want to keep confidential; therefore, for good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, we agree as follows:

1. For a period of twelve (36) months from the date we receive your confidential information ("Effective Date"), we will not use or disclose the information, except: (a) in the event that such information (i) comes into the public domain not through us; (ii) is already known to us at the time of disclosure; (iii) is lawfully otherwise learnt or independently developed by us; or (iv) is required to be disclosed by law.

2. Since a breach of our obligations hereunder may result in irreparable harm to you, we agree that upon such breach or threat thereof, you shall be entitled to specific performance and other injunctive relief without posting a bond, and in the event of disclosures required by court order, we shall promptly notify you of the proceeding.

3. This agreement supersedes all prior discussions and writings and constitutes the entire agreement between you and us with respect to the subject matter hereof. This Agreement shall be binding upon the successors and assigns of the respective parties, and may not be modified except by an instrument executed by both parties.
